Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in the YEA medium for 24 h at 28 °C. The cell concentration of the *Agrobacterium* strains was adjusted to 1.0 × 10⁸ cells/ml. The cell suspension was then mixed with the plant tissue and the transformation efficiency was determined. The results are shown as the mean ± SD of three independent experiments.

Figure 1: Schematic representation of the experimental design. The diagram illustrates the flow of information in a word matching task. It starts with a 'Stimulus' box containing a word (e.g., 'cat'). This is followed by a 'Response' box where the subject provides a word (e.g., 'cat'). The 'Feedback' box then shows the result (e.g., 'Correct'). The process is repeated for multiple trials, with the stimulus and response boxes showing different words (e.g., 'dog', 'cat', 'bird', 'fish', 'insect', 'mammal', 'reptile', 'amphibian', 'mollusk', 'arthropod', 'cnidarian', 'echinoderm', 'mollusk', 'arthropod', 'cnidarian', 'echinoderm').
