The diagram illustrates the experimental setup. A participant is seated at a table, looking at a screen. The screen displays a 3D model of a building with a red arrow indicating the direction of the gaze. The participant is looking at the screen, and the screen is connected to a computer system. The computer system is labeled 'Computer' and 'Data Acquisition System'. The participant is also connected to a 'Data Acquisition System' and a 'Data Acquisition System'.

A detailed map of the New York City subway system, showing various lines and stations. The map is color-coded by line: red for the 4, 5, and 6 lines; blue for the 2, 3, and 4 lines; green for the 7, R, and S lines; yellow for the 1, 2, and 3 lines; and orange for the 4, 5, and 6 lines. The map includes labels for major stations and lines, such as '4, 5, 6', '2, 3, 4', '7, R, S', '1, 2, 3', and '4, 5, 6'.

Sequence logo for the 100bp region around the start of the gene. The y-axis represents information content in bits, ranging from 0 to 2. The x-axis shows positions from -100 to 100. The sequence is shown in a color-coded font: A (green), C (blue), G (red), T (orange). The logo shows a strong consensus for the start codon ATG at position 1, and a strong consensus for the stop codon TGA at position 100.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

Figure 1: Aerial view of the study area showing the location of the study site (red box) within the larger context of the study area. The map includes a scale bar (0-1000m) and a north arrow. The study site is located in the central part of the area, surrounded by various land use types.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases.
